

TNN HUMATE GRANULES

TNN Humate Granules is a lignatious material which is made up of Brown Coal and natural organic compounds supplying the soil with Humus, activated Carbon and Sulphur. TNN Humate granules help to conserve soil moisture, and buffer PH levels, improves the available Calcium and can dramatically improve crop yields in certain soils.

This product will biologically improve the microbial populations of the soil and activate the breakdown of organic matter held in the soil aggregate by oxygenating and releasing Humic Acid into the soil profile.

TNN Humate Granules helps to reduce soil acidity and generally brings life back to the soil.

TYPICAL ELEMENTAL ANALYSIS

Carbon	36%
Humus	22%
Ca	14%
Mg	1.9%
S	6.1%

APPLICATION RATE

Apply between 50—250 kg per ha depending on budget.
